

Rose Spacing Guide

General Guidelines

Sun: Roses need at least 4 to 6 hours of sun each day.

Soil: Roses prefer rich, loamy soil.

Drainage: Roses cannot stand in water, even during the winter when they are dormant.

Companions: Roses can be planted alone or with companion perennials. Be sure to give your roses enough room to mature and fill out.

Buildings: Plant your roses where falling ice and snow will not damage plants.

Suggested Rose Spacing

<u>Rose Classification</u>	<u>Spacing</u>	<u>Coverage (per plant)</u>
----------------------------	----------------	-----------------------------

Hybrid Tea & Grandiflora	30" - 36" apart	6 - 10 sq. ft.
-------------------------------------	-----------------	----------------

Large, elegant blooms on long, straight stems ideal for cutting

Floribunda	24" - 30" apart	4 - 6 sq. ft.
-------------------	-----------------	---------------

Bushy plants with a clustered bloom habit

English Rose	36" apart	10 sq. ft.
---------------------	-----------	------------

Fully double blooms of old roses with the repeat flowering of modern hybrids - ideal for landscaping.

Climber	4' - 5' apart	12 - 15 sq. ft.
----------------	---------------	-----------------

Named for their climbing habit they grow best along trellises or arbors.

Hedge	24" apart	4 sq. ft.
--------------	-----------	-----------

Used for low maintenance "friendly fencing" along property lines.

Shrub		
Large	30" - 36" apart	6 - 10 sq. ft.
Small	24" - 30" apart	4 - 6 sq. ft.

Trouble free and easy to grow, shrub roses provide effective garden borders

Miniature	12" - 18" apart	1 - 2 sq. ft.
------------------	-----------------	---------------

With bloom structure and habit of hybrid teas, miniature roses are grown in containers or used for landscaping in smaller areas.

Tree Rose		
Standard	3' - 5' apart	10 - 15 sq. ft.
Patio	3' - 4' apart	10 - 12 sq. ft.
Miniature	2' - 3' apart	6 - 11 sq. ft.
